Telehouse America is one of the most trusted global data center providers offering secure data center facilities, connectivity, managed IT service, and cloud solutions. Established in 1989, we have 3 data centers in the US (2 in New York and 1 in Los Angeles) that help us to offer uninterrupted, cost-effective services to companies across the US.

We also own and operate two large peering exchanges: NYIIX and LAIIX. We are one stop solution for colocation, connectivity, cloud and managed services.
