Since 2007 we have served hundreds of organizations in the Puget Sound Region and found new uses for more than 4,000,000 pounds of computers, monitors, network equipment, peripherals, telephone systems, cell phones, televisions, consumer electronics and industrial scrap through re-use, repair, and responsible recycling practices.

The material we safely diverted from landfills has been put back into use or refined to manufacture new products. Using recycled materials is often more carbon-efficient than mining and producing virgin materials, which makes electronics recycling a double-win for our environment.Help us make and even bigger impact.
