QC Forging is the leading forging company in the US providing affordable and quality metal components that are durable, safe and solve challenging manufacturing problems. Our products also prevent equipment failures that can be a result of critical weather conditions and situations. We produce small forgings for severe service applications in the transportation, construction, agricultural, medical, and aerospace industries. Our team of engineers is highly qualified, experienced and trained to deliver innovative solutions for different industries. From copper alloy forgings to turbocharger impellers, we guarantee to provide you with a quality forge for OEMs every time. Get in touch with us now to discuss your requirements.
