With the use of state of the art integrated projection technology we are able to show your complete project – including upper and lower floors, external landscaped areas, common areas, renders, and more at a ‘true’ 1:1 scale.

You can park your vehicles in the projected carpark and walk around your whole property before taking the next steps into VR/AR/XR. Your whole family, design team, and stakeholders can experience this all at the same time.

We incorporate the use of real furniture and props, as well as partition walls and decorations, to give you the best chance possible of perfecting your design.
