As a biotechnology company, Lifeasible is specialized in agricultural science, offering a wide variety of agro-related services and products for environmental and energy solutions.

Our plant breeding and culture services support increasingly stringent safety and quality standards in the agricultural industry. Relying on our revolutionary techniques, various molecular breeding services and molecular diagnostic methods are offered for a wider range of agriculture-related sectors. Meanwhile, extensive analytical solutions reach out to a wider community of researchers in environmental and energy fields. Holding a strong tie between biological innovation and transformation in the ecosystem, Lifeasible now leverages the expertise and strengths of each to create its unique platform that is accessible to all leaders working in agriculture, botany, biology, ecology and environmental science. Having taken on step forward, we also provide lab-to-field solutions that advance the breeding process for farmers and breeders. Diverse analytical tools are available for breeding or quality control purposes in identification and production of plants.
