CD BioSciences Longevity provides a high-quality and reliable biological age clock technology platform for longevity research to advance your aging research. We use DNA methylation, telomere measurement, transcriptome, proteome, metabolome and other aging clock technologies to provide aging research services to global customers, which can help the continuous development of aging and related drug research. As an expert in the field of aging, we have created a complete technical system for aging research for customers, only to provide the highest quality technical services.
