Company logo

Founded in 1947, NessCampbell has worked hard to serve the needs of clients and communities in Oregon, Washington, and Idaho. Over the years, we've grown to employ over 300 individuals, added over 100 cranes to our fleet, and established 8 locations across the Northwest. We also provide specialized transportation rigging, machinery moving and engineering services whenever you need them, 24 hours a day.

While our primary goal is to help our clients complete their projects in a timely and cost-effective manner, we prioritize safety above all else. Our estimating and engineering team will work with you to understand your project's details so that they can develop a customized plan for helping you achieve your desired outcome. At NessCampbell, our clients are our partners; we will walk side-by-side with you throughout every phase of the process to ensure that every logistical challenge is addressed and resolved safely.

We believe that information and experience are key elements of success. That's why we've implemented a series of innovative training programs to support our employees and staff, ensuring that they have continuing access to the tools and programs they need to keep up with new advancements in equipment, machinery, and safety protocols. Most of our employees make lifelong careers with us, advancing their skills with regular training. By supporting and encouraging our team to strive for excellence, we can foster a culture of curiosity, growth, and greatness.
