At the heart of FixMyCrack is a commitment to sustainability, transparency, and community empowerment. With a green ethos, FMC operates as a carbon-aware service, recycling electronic parts, and planting a tree for every repair, as well as using sustainable transport options for its repairs on the move. Transparency is embedded in our processes; your device won't disappear into a black box - we keep you informed at every stage. Beyond fixing gadgets, FMC empowers students by providing valuable skills through comprehensive training programs, fostering a community-driven approach to tech repair. We prioritise quality, utilising premium UK-sourced parts, and ensuring meticulous checks before installation.

FixMyCrack isn't just a tech repair service; it's a movement. Our journey is marked by innovation, sustainability, and a commitment to transforming the tech landscape. Join us in redefining how technology is repaired, one campus at a time. We're not just fixing devices; we're empowering students, embracing sustainability, and fostering a sense of community in every repair. Welcome to the Crack Team - where tech meets innovation, and service goes beyond repairs.
