In August 2015, Gear Pump Manufacturing (GPM) made a strategic investment in a Supply Chain Warehouse located just south of Memphis, TN, in Nesbit, MS. This facility, known as GPM-US, was established to enhance our ability to serve our North and South American customer base more efficiently. By April 1, 2016, we had successfully stocked the warehouse with our high-quality Cast Iron Gear Pumps and officially began operations.

The establishment of this supply chain warehouse has provided significant benefits to our Western-based customers. It has enabled them to reduce their inventory costs by allowing for quicker and more reliable shipping times. This strategic move has also strengthened the GPM-US market position, ensuring that we can meet the demands of our customers promptly and effectively. As the sole distributor of GPM quality gear pumps in the region, GPM-US continues to uphold our commitment to excellence and customer satisfaction
