I’m the owner of VPS Core, a hosting company proudly based in the United Arab Emirates. I started VPS Core with one clear goal: to give people **Best Cheap VPS Hosting** without cutting corners on quality. I know what it feels like to need fast, reliable servers but not want to pay overpriced rates, so I built a platform that stays affordable and powerful for everyone.

From UAE, I’ve expanded our services worldwide. Today we offer VPS in the USA, UK, Turkey, UAE, Australia, Canada, and many more locations, so customers can choose the region closest to their audience. Every server we provide comes with dedicated resources, SSD/NVMe storage, full root access, and instant scalability. I also made sure our billing supports modern needs, including crypto payments, so clients can pay easily from anywhere.

For me, VPS Core isn’t just a business—it’s a promise. I’m committed to delivering stable uptime, honest pricing, and real support that helps your project grow confidently.
