Cyclo Fans offers a range of advanced variable speed controller solutions designed to optimise fan performance, improve energy efficiency and enhance airflow control across Australian commercial and industrial applications. From precision variable speed drives to user-friendly switches, Cyclo’s speed controllers allow tailored control of ventilation systems, helping reduce noise and power use while delivering smooth, reliable operation.

At Cyclo Fans Australia, you’ll find a comprehensive selection of variable speed controller options engineered to give you flexible, efficient control over ventilation and motor speed for commercial and industrial environments. Cyclo’s range includes programmable variable speed drives (VSDs) that deliver precise motor control and adaptability across fan, pump and machinery applications, as well as simpler variable speed switches that allow easy adjustment of airflow and performance to match real-world needs.

Variable speed controllers are an affordable way to fine-tune your system’s airflow, minimise energy consumption and reduce operational noise without compromising performance. The Cyclo VSD range features IP66-rated enclosures, versatile single-phase and three-phase support, built-in control features and easy-to-use interfaces, making these controllers ideal for demanding industrial or commercial installations. This flexibility helps extend equipment life and enhances overall system responsiveness while aligning with Australian safety and performance expectations.

Whether you need full variable speed drives for complex motor control or simple adjustable switches for basic speed modulation, Cyclo’s speed controllers deliver reliable, energy-smart solutions backed by decades of ventilation expertise.
