Intouch Tech is a UK-based managed technology provider delivering expert IT support, telecoms, cyber security, and connectivity solutions to businesses of all sizes. Since 2012, we have built a reputation as a reliable, single-point technology partner — combining diverse expertise into targeted solutions that keep organisations secure, efficient, and future-ready.

Our services cover the full technology stack: managed IT support and proactive monitoring, VoIP and cloud phone systems, high-speed broadband and leased line connectivity, cyber security and compliance, Microsoft 365 and Power Platform, and professional website creation. Every solution is designed around the client's business, not a one-size-fits-all package.

Cyber security sits at the heart of everything Intouch Tech delivers. With threats growing in complexity and frequency, our dedicated in-house security team provides 24/7 SOC monitoring, endpoint detection and response, ransomware protection, dark web credential monitoring, and email threat filtering — all managed by UK-based engineers with no third-party handoffs. We also support businesses through Cyber Essentials certification, helping organisations meet compliance, insurance, and customer requirements with confidence.

At the core of Intouch Tech's approach is a commitment to proactive support — catching issues before they become problems and responding fast when they do. With in-house UK engineers, no outsourcing, and ratings from over 1,000 organisations, Intouch Tech gives businesses the confidence to focus on growth while their technology runs smoothly in the background.
