# MEDEX

## Your health in **SAFEST HANDS**

Imagine being able to visit one medical facility for all your issues, whether you need an electrocardiogram or just an annual checkup. When you visit the Medex Diagnostic and Treatment Center on Queens Boulevard in Forest Hills, NY, you have access to a wide range of specialists who work with each other to keep you healthy.

While you may start with a primary care physician, you don't have to leave the facility to see a cardiologist, ophthalmologist or any of a dozen other specialists. Each of these physicians are top-rated in their fields, with credentials to prove their expertise. Medex is the latest trend in medicine: direct care when you need it, where you want it.

*Patients also have access to dietitians and nutritionists who can guide patients on how to lose or maintain their weight and reduce complications of diabetes. In addition, their ophthalmologists and optometrists can treat a variety of eye conditions and vision problems, and their psychiatrists and psychotherapists are able to assist with various mental health issues. Social workers are also available to help with acquiring special housing services, transportation, financial aid, home health care, and more.*
