The Little Market Plants is the Online plants Located near Melbourne CBD

In botany, succulent plants, also known as succulents, are plants with parts that are thickened, fleshy, and engorged, usually to retain water in arid climates or soil conditions.

These successes need lots of bright light approximately 4-6 hours of direct light each day, they are not suitable for dark rooms. They will thrive best outdoors in courtyards or a balcony.

Water every week or when the soil feels dry to touch.
